

Antenna Placement

Pull the rods out as far as they will go. (fully extended) Place rods in the same position as shown in the picture below.

The rods or rabbit ears of the antenna need to be aligned so they are perpendicular or at a right angle to our transmitter site.

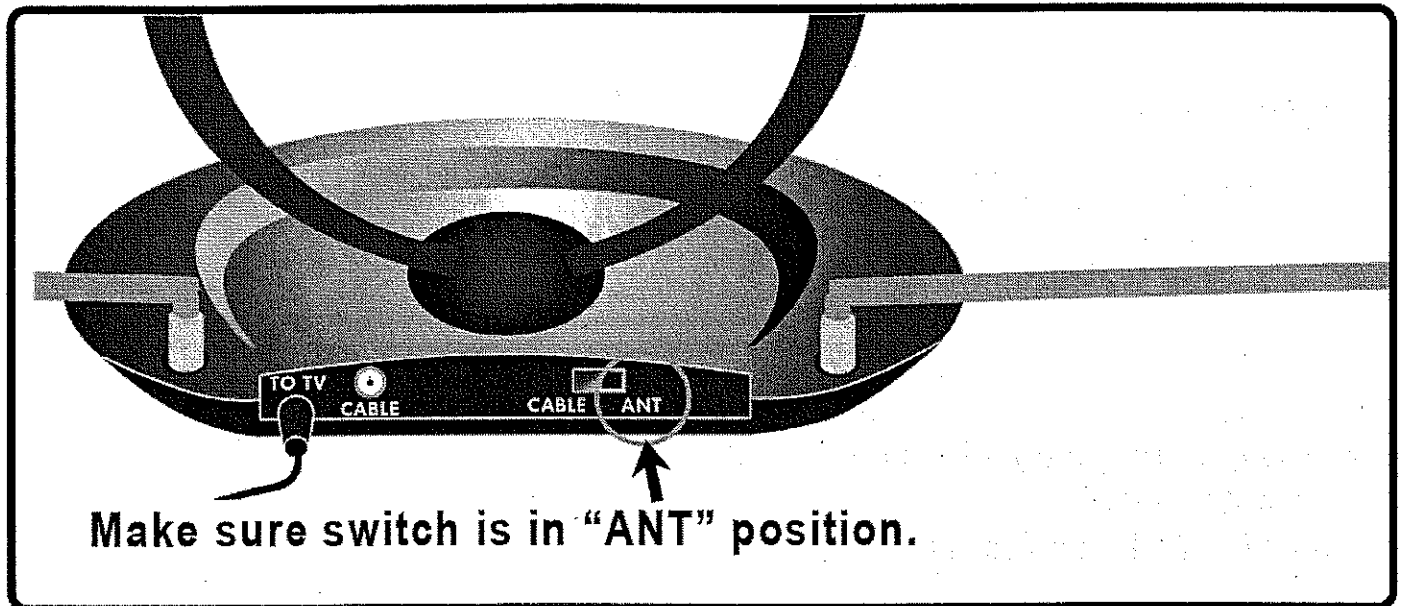

This will maximize the reception of our transmitted signal.

Our DTV transmitter site is located on Crestview Lane just off Covington Pike and Hwy 40.
Example: If you live in Collierville, point the tips of the antennas North East and South West.

Antenna Instruction

After you install your antenna, please call or email WMC and let us know the quality of your Channel 5 reception.
